

ITEC 2026 · INTERNATIONAL TRACK BY FOUNDERS LAIR · BEIJING CHAOYANG · AUGUST 2026

EKZA

Create once. Own it. **Play it across games.**

Ekza combines AI-assisted 3D creation, a persistent player profile and partner integrations so one owned avatar can have approved, game-ready versions across multiple titles.

● Working ownership stack

● AI · Digital Culture · Gaming

● Cross-game 3D integration

● by Wotori Studio

ekza.io

AI can generate an asset. It still cannot make it **playable everywhere**.

Image and 3D models make creation faster, but raw output is rarely rigged, optimized, licensed or compatible with a real game. Player identity also remains locked inside separate game accounts.

Cross-game does not mean one file fits every game.

Art direction, skeletons, animation systems, polygon budgets, materials and gameplay rules differ. A portable asset needs a shared identity plus an approved rendition for every partner game.

Ekza keeps ownership and permissions common while producing the version each game can ship - starting with Cocos Creator on Weixin Mini Games in China.

One player profile connects every approved **game version**.

An asset passport links source, ownership, permissions and revenue rules to game-specific renditions - including Cocos Creator for Weixin and Tuanjie for Douyin.

“One owned identity. Multiple game-ready renditions.”

THE EKZA ASSET PASSPORT

Open AI models become one creation-to-game workflow.

Users direct creation while Ekza orchestrates image and 3D generation, keeps editable source history, and routes the result through human curation and technical adaptation.

The user profile is the **portable layer**.

Players see what they own, which games support it and which approved rendition will load. Partner games read a simple entitlement and retrieve the correct asset version.

Four product layers make AI assets usable across games.

Ekza unifies user creation, persistent identity, asset records and game delivery. The model provider and blockchain can change without breaking the user relationship.

P1	AI Creation Studio	Guided image + 3D model orchestration for users
P2	Player Profile	Persistent identity, inventory and supported-game status
P3	Asset Passport	Source, ownership, permissions, versions and shares
P4	Partner SDK & Adapters	Entitlement checks and game-specific asset delivery
OPS	Production & settlement	3D adaptation, QA, licensing and contributor payouts

The moat compounds with each partner: **requirements schema, rendition history, entitlement adapters and reusable QA baselines** - not one foundation model.

Core ownership and 3D integration primitives **already work.**

Four Solana programs are deployed on devnet: Stellar, Space, Avatars and Minter. Ekza Arena and Omoba provide controlled game contexts; external cross-game interoperability is the next proof point.

Stellar

Collaborative asset records, lineage and contributor shares.

• live on devnet

Space

Ownership and configurable entitlement primitives.

• live on devnet

Avatars + Minter

Portable identity and asset-minting primitives.

• 2 programs on devnet

Ekza Arena + Omoba

4 live devnet universes, 100 addressable content records and 200+ Arena-stack tests.

• integration proof

One avatar collection. Two partner games.

A focused pilot co-creates a small collection, produces a master plus title-specific versions, and connects them through one player profile.

- ♦ **Shared creative brief** - one recognizable character collection.
- ♦ **Concrete deliverables** - one master, two approved renditions and two partner integrations.
- ♦ **Success criterion** - entitlement and partner QA pass in both games.

target: 8-12 weeks after discovery → one collection → two live games

Ekza character collection – pilot goal: one owned identity activated in two games

Game partnerships come before player acquisition.

Ekza will use Chaoyang to recruit Weixin and Douyin mini-game and digital-culture studios around funded proof-of-concept integrations, then reach users through participating games.

each live partner makes the profile more useful and the next integration easier

ITEC can turn the missing input – local partner access – into a measurable cross-game pilot.

A paid two-game pilot funds the first reusable adapters.

Founder-set planning targets - not historical revenue.

Ekza has not yet closed an external game pilot.

RMB 150-200k

POC FEE • PER TITLE

Shared collection, approved rendition, adapter and partner QA.

RMB 300-400k

FIRST CROSS-GAME PROOF

Two paid title-level PoCs activating one collection across two games.

RMB 60-80k

ANNUAL PLATFORM FEE

Per live title: profile, entitlement, delivery and version management.

10%

LICENSE TAKE RATE

Target share of Ekza-enabled licensing; excluded from the base case.

RMB 630-840k • Year-1 target revenue

Planning case: 3 paid title PoCs + 3 annual platform fees. Licensing revenue excluded.

≥30%

Target delivery gross margin; reusable adapters improve repeat-project margin.

Service-led entry, platform-led scale. Pricing and willingness to pay will be validated through Beijing partner discovery.

Mini-game growth gives Ekza a concrete ITEC launch scenario.

Ekza targets partner production and integration spend - not total game revenue.
Chaoyang provides the landing route, partner access and local delivery capacity.

RMB 188.45B

China game revenue

H1 2026 · +12.17% year on year

MARKET CONTEXT

RMB 31.66B

Mini-program game revenue

H1 2026 · +36.01% year on year

FOCUSED ENTRY SEGMENT

500M

People play Weixin Mini Games each month

Tencent · 20 August 2026

DISTRIBUTION REACH

Digital Culture + AI → Chaoyang entity → Cocos / Weixin pilot → three paid partner-title PoCs

Files, closed ecosystems and standard avatars solve only **part of portability.**

CATEGORY / EXAMPLE	AI / USER CREATION	PERSISTENT PROFILE	GAME-SPECIFIC VERSIONS	PARTNER INTEGRATION	RIGHTS / REVENUE RECORD
Fab / Unity Asset Store	No	No	File formats	Buyer-led	Store license
Ready Player Me†	Avatar creator	Yes	Standard avatar	SDK (historical)	Not stated
Closed game ecosystems	Varies	Inside platform	No	Platform-native	Platform rules
3D production studios	Optional	No	Bespoke	Service-led	Project contract
Ekza — target product	Guided workflow	Yes	Approved per game	SDK + service	Asset passport

† Ready Player Me states that its services were discontinued on 31 January 2026. Ekza differs through studio-approved per-game renditions and a portable rights record.

Founder-market fit across animation, game technology and software.

A rare founder-market fit: 15 years in 3D and game technology, 7 years of commercial software development, and a Master's in Computer Science earned in Beijing.

Dmitrii Sobolev
(aka Wotori)

FOUNDER · CREATIVE TECHNOLOGIST

- 15 years · 3D, animation & game technology
- 7 years · commercial software development
- Master of Computer Science · USTB Beijing, 2024
- Master of Design · HSE, 2019
- HackAtom VI · 2nd place

FOUNDER-LED · WOTORI STUDIO DELIVERY BENCH

Shipped evidence: Ekza ownership stack, Ekza Arena, Omoba and 0→100 Engine. Current delivery combines Dmitrii with senior specialists engaged per build; Beijing adds dedicated partner and integration roles. **wotori.io**

BEIJING BUILD PLAN

- + Chaoyang operating entity and local delivery base
- + Cocos / Tuanjie integration engineer
- + China game-partnership lead
- + Licensing, data and payment-compliance support

Turn technical proof into paid Beijing integrations.

● WORKING NOW · VERIFIED

Ownership stack

Four devnet programs plus controlled game and 3D contexts

0-3 MONTHS

Beijing landing

Chaoyang entity, local integration capacity and partner discovery

3-9 MONTHS · SHIP

Two-game pilot

One collection and approved renditions live in two partner games

9-12 MONTHS · REPEAT

Third paid title

Repeat integration on recurring commercial terms

Capital plan · RMB 3.0M / 18 months

40% partner PoCs and adapters · 25% profile/SDK productization · 20% Beijing team and operations · 15% licensing, data and payment compliance

12-month target · 3 paid title PoCs

Two partner games live · one paid repeat · RMB 630-840k target revenue.
No external pilot or revenue is claimed today.

Create once. Own it. **Play it across games.**
