

THE COLLABORATIVE OWNERSHIP PROTOCOL FOR GAME-READY 3D CONTENT

EKZA

Create together. Own forever.

EKZA lets creators co-create 3D characters, items and worlds – and keep earning every time their work is sold, rented, licensed or played. Every contribution is recorded; every payout follows the record.

● Working open-source alpha

● Creator-owned digital IP

● Rail-agnostic by design

● by Wotori Studio

ekza.io

AI made creation abundant. Ownership is still **stuck in the file era.**

Content creation became collective and iterative – concept, model, rig, animation, refinement.
But rights and income still work like a single file changing hands once, for a one-off fee.

portable rights records

inside a prompt, mesh or engine export

SOURCE · CONTRIBUTORS · SHARES · APPROVALS

Creator earnings are real – but locked inside platforms. The missing piece is an ownership record that travels with the work.

Sell the file, and the story ends — for everyone who made it.

A character is made by many hands. When it ships as a file, the record of who made what disappears — and so does everyone's claim on what the asset earns next.

An asset is not a file. It is a **living graph of contributions.**

EKZA records every contribution, right and revenue share in a verifiable asset passport. The 3D files stay off-chain and evolve freely; the record travels with the work – across companies, games and years.

“Every sale, rental or license routes revenue back through the full contributor graph – automatically.”

THE EKZA ASSET PASSPORT

Contribute a layer. Keep a share of everything after.

Creators build on each other's work in guided, AI-assisted workflows. Each layer – story, concept, model, rig, animation – is recorded in the graph with an agreed share of future revenue.

Settlement follows the record: a payout is valid only when it matches the shares written in the passport – no invoices, no chasing, no silent rewrites.

CREATORS

Direct the work, keep the asset in their profile and hold a permanent share of its revenue.

EKZA

Maintains the passport schema, version graph, production workflow and game adapters.

GAMES & LICENSEES

Read a simple entitlement and receive the approved, integration-ready package.

Cross-game does not mean one file fits every game.

Art direction, skeletons, animation systems, polygon budgets and gameplay rules differ.
A portable asset needs one verified identity plus an approved rendition for every game.

The passport keeps identity, rights and approvals common. EKZA produces the version each game can actually ship.

One asset graph.

A flywheel of creation, play and income.

Each surface feeds the next: created assets enter profiles, live in owned Spaces, ship into games – and every transaction routes value back to the people who made the work.

revenue flows back through the graph – every asset makes the next collaboration more valuable

The moat is the graph. Requirements, rendition history, rights schemas and adapters compound with every creator, asset and game.

This is not a concept. The core primitives already run.

Four open-source programs implement the asset graph, ownership, identity and minting patterns on a public developer network. Arena and Omoba provide controlled game contexts.

Stellar • EKZA module

Collaborative asset graph, lineage and contributor shares.

• live • open source

Space

Ownership and configurable entitlement primitives.

• live • open source

Avatars + Minter

Portable identity and asset-minting primitives.

• 2 live programs

Ekza Arena + Omoba

4 live content universes, 100 addressable content records and 200+ automated tests.

• integration proof

A creator economy that is owned by the creators.

Roblox proved that creator earnings scale inside one platform. EKZA opens that model: a cross-game body of creator-owned IP, living in virtual spaces the creators own too.

WHERE RECOGNIZABLE IP GOES NEXT

NOW

Collaborative game assets with recorded shares

NEXT

Cross-game characters, items and licensed IP

THEN

Creator-owned virtual spaces and worlds

BEYOND

Recognizable IP licensed past the screen

Paid integrations build the network before consumer scale.

EKZA lands with games, IP owners and creator platforms that need verifiable rights plus production-ready 3D delivery. Each paid build leaves reusable infrastructure behind.

\$20–30k

LAND • PAID TITLE POC

Asset, passport, approved rendition, adapter and partner QA.

\$10–15k

RECUR • ANNUAL TITLE FEE

Profile, entitlement, delivery and version management.

10%

FLOW • TARGET TAKE

EKZA-enabled licensing and contributor settlement.

N×

EXPAND • NETWORK

More assets, approved renditions and games per passport.

Service-led entry, platform-led scale

The first integration pays for the adapter; every reuse shifts revenue toward software and licensed flow.

Open schema + SDK

Replication path beyond one studio and one integration team.

Founder-set pricing hypotheses. No external paid pilot or revenue is claimed today; partner validation is the next milestone.

Built by a creator — for creators.

Dmitrii combines 15 years in 3D and game technology with 7 years of commercial software development and hands-on protocol delivery.

Dmitrii Sobolev (aka Wotori)

FOUNDER · CREATIVE TECHNOLOGIST

- 15 years · 3D, animation & game technology
- 7 years · commercial software development
- Master of Computer Science · USTB Beijing, 2024
- Master of Design · HSE, 2019
- HackAtom VI · 2nd place

FOUNDER-LED · WOTORI STUDIO DELIVERY BENCH

Shipped evidence: the EKZA ownership stack, Ekza Arena, Omoba and 0→100 Engine. Senior 3D and engineering specialists are engaged per build through Wotori Studio. **wotori.io**

HOW THE WORK SHIPS

- + Founder owns architecture, protocol and releases
- + Open-source repositories and public tests
- + Studio bench covers 3D production and QA
- + Co-build proof: 70 public commits in a multi-contributor protocol

The rails for creator-owned IP are being laid now.

● WORKING NOW

Open-source alpha

Asset graph, ownership, identity and minting primitives live with controlled game contexts

NEXT

Licensing economy

Game-ready bundles – buy, rent, license – with automatic contributor payouts

THE DREAM

Creator-owned universe

A cross-game world built from what creators make – and own

For games, IP owners and creator platforms

Verifiable rights plus production-ready 3D delivery – one passport, an approved rendition per title, automatic settlement.

For investors and partners

Working open-source primitives, a service-led wedge and a compounding rights graph. Join the build early.

Create together. Own forever.
